Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 2633

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 2, 3, 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Javitt et al (6,031,648).

Javitt et al discloses an optical transmitter (220,210,230,240) for use in a multi-channel video optical transmission system, which converts a multi-channel video signal (f_2 - f_N , Fig. 2) into an optical signal (252, Fig. 2)) and transmits the converted optical signal through an optical fiber (250, Fig. 2) to an optical receiver (270,280,290,300,310,320,330,340), the optical transmitter comprising: pilot signal generating means (210) for generating a pilot signal to be superimposed on the multi-channel video signal (f_2 - f_N) inputted; and electrical-optical converting means (240) for converting the pilot signal superimposed multi-channel video signal into an optical signal (252, Fig. 2) and further for putting the converted optical signal out to the optical fiber (250). The receiver further comprises an amplifier (280) and an optical-electrical converter (270).

It is well known in the art to provide a frequency modulator in the pilot signal generating means to modulate a frequency of the pilot signal for modulating a frequency of an intermodulation distortion occurring at frequencies corresponding to the sum of and difference between a frequency of each carrier of multi-channel input signal and a frequency of said pilot signal.
